# Allinfra's Green Finance Impact Reporting Tool

Winner of HKMA Green Fintech Competition's Green and Sustainable Finance Category

**Problem Statement:** How can technology make it easier for banks to ensure compliance with different standards, regulations and taxonomies?

**Solution:**

- Flexible blockchain-based reporting system with third party verification.
- Ability to build formulas for specific KPI tracking needs and generate on-demand reports.
- Collection and visualisation of climate-relevant data at the device, asset or portfolio level.

## Key Benefits

- Reduce cost of data collection.
- Improve reliability of data collected.
- Seamlessly integrate into reporting and financial products.
- Deliver maximum transparency while maintaining privacy.

The screenshot displays a user interface for a corporate sustainability performance report. At the top, it shows the 'CLIMATE' logo and the title 'Corporate Sustainability Performance Target Report for Enterprise ABC'. Below this, there are four summary boxes: 'Report generated by Enterprise ABC', 'Generation date 07 Jan 2023', 'Report period 01 Jan 2020 - 31 Dec 2022', and 'Report purpose Corporate Sustainability Performance Target Report'. The main section is titled 'Corporate Sustainability Target KPIs' and contains a table with three rows of KPIs. Each row includes a KPI ID, a description, and data for the years 2022, 2021, and 2020, along with 'Audit Trail' and 'View' buttons. The KPIs are: 1) Reduce industrial waste generated to under 150k tons by 2022 (142k tons in 2022); 2) Reduce freshwater consumption to under 30 mcm by 2022 (29.6 mcm in 2022); 3) Reduce GHG emissions by over 250k tCO2 through CCS technology by 2022 (272,195 tCO2 in 2022). Below the table, there is a formula section:  $PF_{C-SP} = CO2\ Produced_{C-SP} - CO2\ Transferred_{C-SP}$ . The final part of the screenshot shows a table for 'Project emissions from the primary process (physical CO2 emissions) that have not been captured by the CO2 capture process'. This table has columns for 'Parameter name', '2022', '2021', '2020', and 'Verification Status & Report'. The parameters listed are 'CO2 Transferred<sub>C-SP</sub>' and 'CO2 Produced<sub>C-SP</sub>', with their respective values for each year and a 'Report' button.

KPI ID	Description	2022	2021	2020	Audit Trail	View
#1	Reduce industrial waste generated to under 150k tons by 2022	142k tons	155k tons	212k tons	Audit Trail	View
#2	Reduce freshwater consumption to under 30 mcm by 2022	29.6 mcm	30.8 mcm	32.8 mcm	Audit Trail	View
#3	Reduce GHG emissions by over 250k tCO2 through CCS technology by 2022	272,195 tCO2	240,455 tCO2	217,784 tCO2	Audit Trail	View

Formulas >  $PF_{C-SP} = CO2\ Produced_{C-SP} - CO2\ Transferred_{C-SP}$

Parameter name	2022	2021	2020	Verification Status & Report
CO2 Transferred <sub>C-SP</sub>	295,844 tCO2	271,227 tCO2	261,959 tCO2	Report
CO2 Produced <sub>C-SP</sub>	328,715 tCO2	331,254 tCO2	338,452 tCO2	Report

## **Problem Statement:**

How can technology be leveraged to facilitate the collection of information about clients' emissions or transition plans and the analysis on clients' transition progress in relation to the bank's own target?

## **Cogo's Net Zero Transition solutions for banks and their customers:**

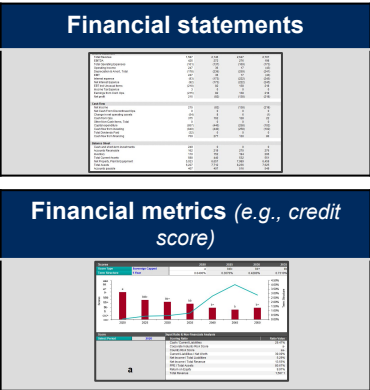

1. Carbon Data Report – Financed Emissions Baselines Understanding
2. Personal Carbon Manager – for individuals' green lifestyle development
3. Business Carbon Manager – for SMEs to report and decarbonize

# Introducing Climate Credit Analytics

A climate scenario analysis solution that captures transition and physical risk in a rigorous and transparent manner

### Output

### Our approach

- **Climate Credit Analytics** combines **S&P Global's** best-in-class data and credit analytics with **Oliver Wyman's** industry-leading climate scenario and stress testing expertise
- Our solution is designed for banks, insurers, asset owners and managers, and corporates that want to assess impacts of climate scenarios on the financial performance of public and private companies
- The offering uses climate scenarios, sector specific data and company specific financial and asset data on corporates and portfolios to produce impact on a company's creditworthiness

### Use cases

- **Risk management:**
  - Regulatory climate scenario exercises & stress tests
  - Disclosures & TCFD implementation
  - Climate risk appetite
  - ICAAP
- **Business strategy and opportunities:**
  - Portfolio steering and alignment
  - Client engagement
  - Capital solutions and opportunity identification
  - Corporate development (M&A & divestures)

### Differentiators

Industry-leading methodology	Tailored to sector nuances
Automation	Full coverage
User-specific adjustments	Granular Output
Reliability in disclosures	Successful regulatory submissions
Documentation	Ease in Implementation
Validated model suite	Ongoing Updates and Services

## Problem Statement:

Standards and regulations relating to green and sustainable finance are varied and evolving. Different jurisdictions have different regulations about the green labelling of investment products and different taxonomies for green or transition activities. It is difficult for banks to monitor compliance, and there could be greenwashing risks if banks offer products that are not aligned with the latest regulations or taxonomies.

How can technology make it easier for banks to ensure compliance with different standards, regulations and taxonomies?

## ESG data collection can be used for:

INVESTMENT STRATEGY	<ul style="list-style-type: none"> <li>• Investment vs Engagement/stewardship vs Disinvestment decisions</li> <li>• Disclosure and understanding of ESG themes for sectors and activities</li> </ul>
ASSET ALLOCATION	<ul style="list-style-type: none"> <li>• Entity and security selection, peer comparison</li> </ul>
PORTFOLIO CONSTRUCTION	<ul style="list-style-type: none"> <li>• Overall ESG rating (or sub-components of it) for negative/positive screening, ESG-optimization at entity, instrument level</li> </ul>
BENCHMARKING AND INDEX CONSTRUCTION	<ul style="list-style-type: none"> <li>• Use of ESG Ratings for weighting or inclusion/exclusion</li> </ul>
RISK MANAGEMENT	<ul style="list-style-type: none"> <li>• Exposure to ESG risk factors, stress testing</li> </ul>
"TRANSITION" IDENTIFICATION	<ul style="list-style-type: none"> <li>• Identification of levers, sector and assets concentration</li> <li>• Definition of target portfolios</li> </ul>
DISCLOSURE AND REPORTING	<ul style="list-style-type: none"> <li>• For regulators and stakeholders, report on alignment, portfolio quality and breakdown</li> </ul>

### Bank goals

- ESG data collection
- Risk assessment / regulatory disclosure
- Green finance / sustainability linked loans
- Transition finance opportunities
- Market leader in climate initiatives

# Climate Contracting Panel
